# What are Killzones?

## Key Points

» There are 2 key elements of market:

**1 Price which includes FVGs, Orderblocks and Liquidity**

**2 Time which includes Killzones and Silver Bullet.**

» Killzones are high probablistic areas in time.

» Killzones are high probability areas because maximum volume is traded during these times and hence you can expect for higher volatility.

» Killzones are of 4 types and they are different for both forex and indices:

### FOREX

- Asia
- London
- New York AM
- London Close

### INDICES

- Asia
- London
- New York AM
- New York PM

*The Main Difference*

# Low Probability Setups with Killzones

## Key Points

- » Knowing what not to look for will shift your focus towards A+ setups only.
- » All the following setups might have worked in the past but have now become redundant and somehow twitter traders will make you that they still work.

### For Indices:

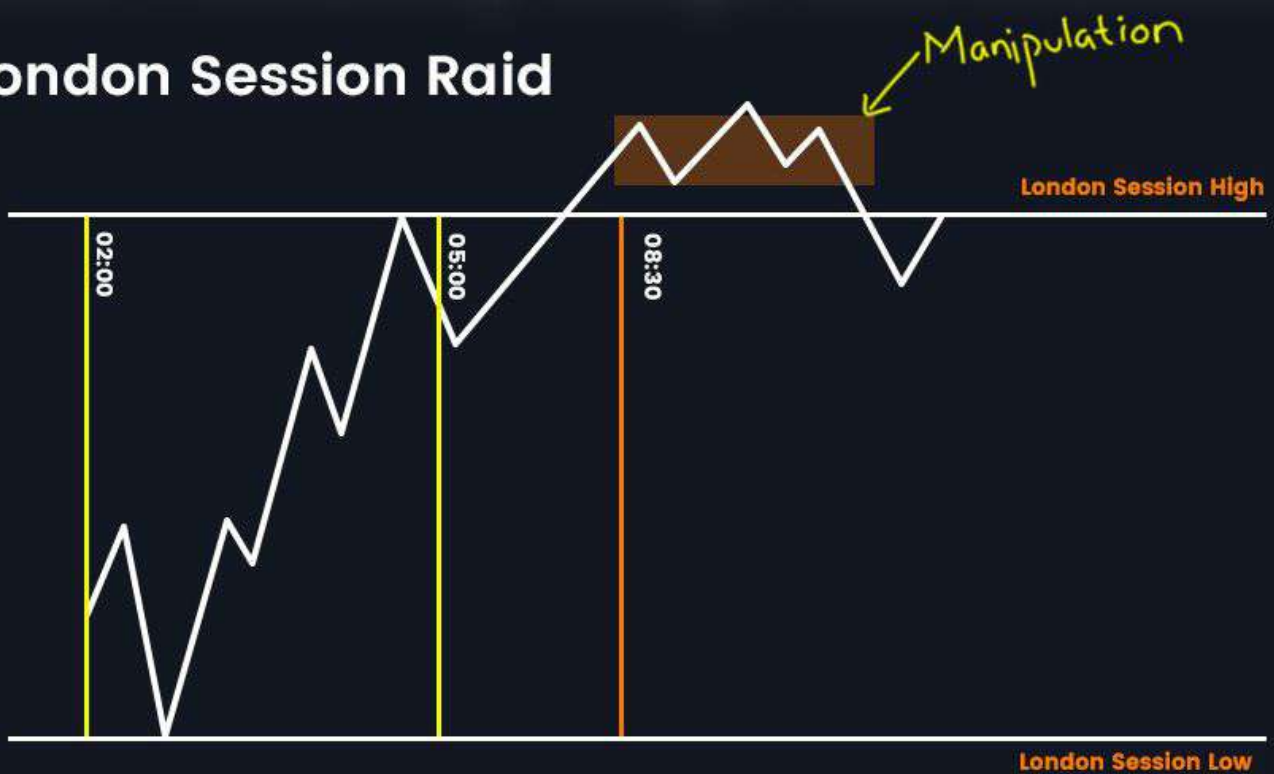

## 1. PM Session Ranges

- » Wait for PM session low and high to form and take a trade next day when one side gets purged.

# Low Probability Setups with Killzones

## 2. London Session Raid

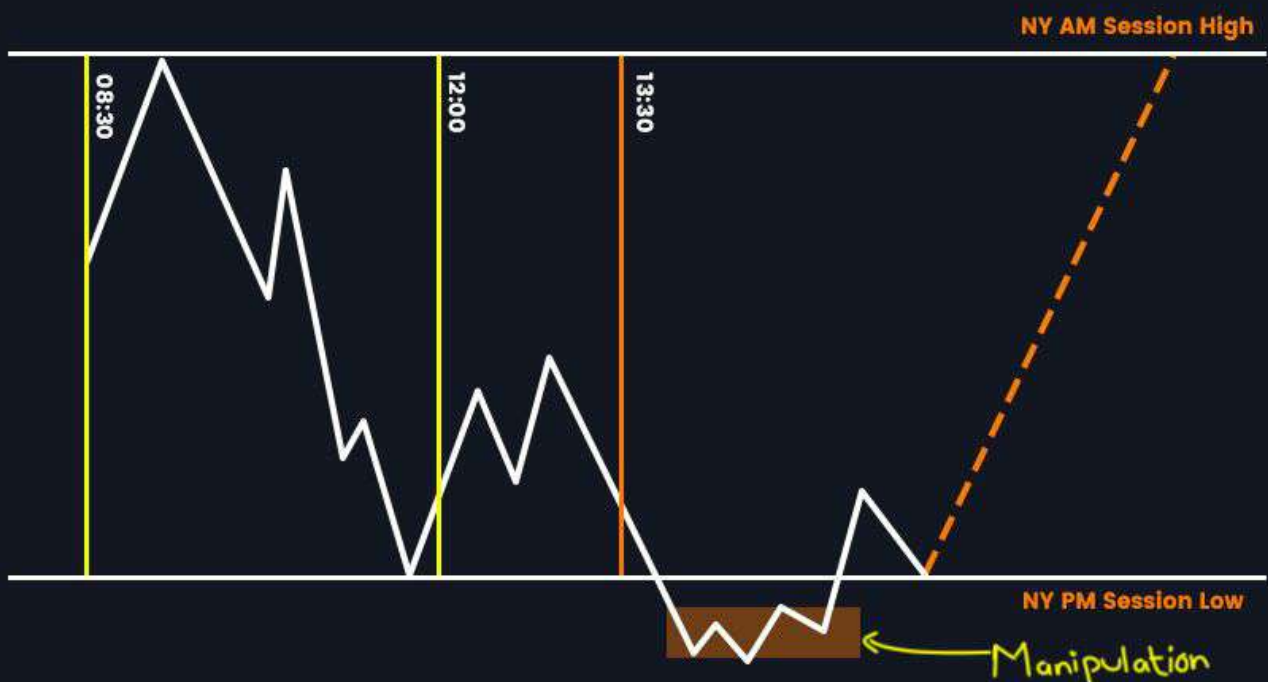

- » Wait for London session low and high to form and take a trade when there is a liquidity purge/manipulation either side.

# Low Probability Setups with Killzones

## 3. AM Session Ranges

- » Wait for New York Am session low and high to form and take a trade when there is a liquidity purge/manipulation either side.

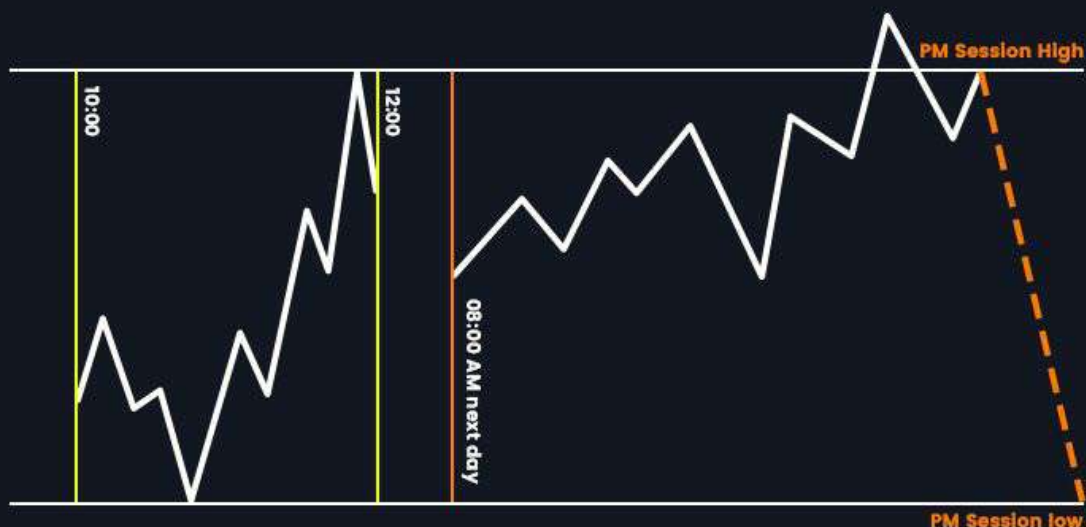

# Low Probability Setups with Killzones

## Key Points

- » Knowing what not to look for will shift your focus towards A+ setups only.
- » All the following setups might have worked in the past but have now become redundant and somehow twitter traders will make you that they still work.

### For Forex:

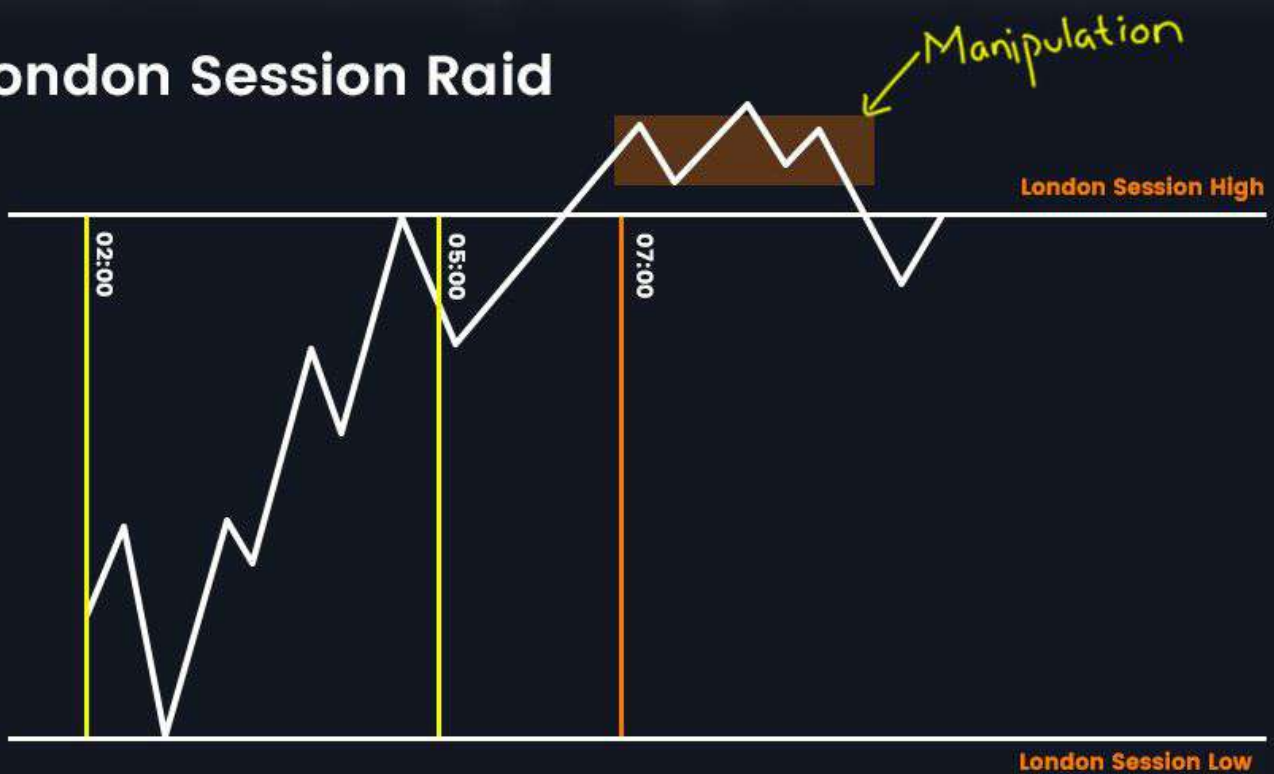

## 1. London Close Ranges

- » Wait for London close low and high to form and take a trade next day when one side gets purged.

# Low Probability Setups with Killzones

## 2. London Session Raid

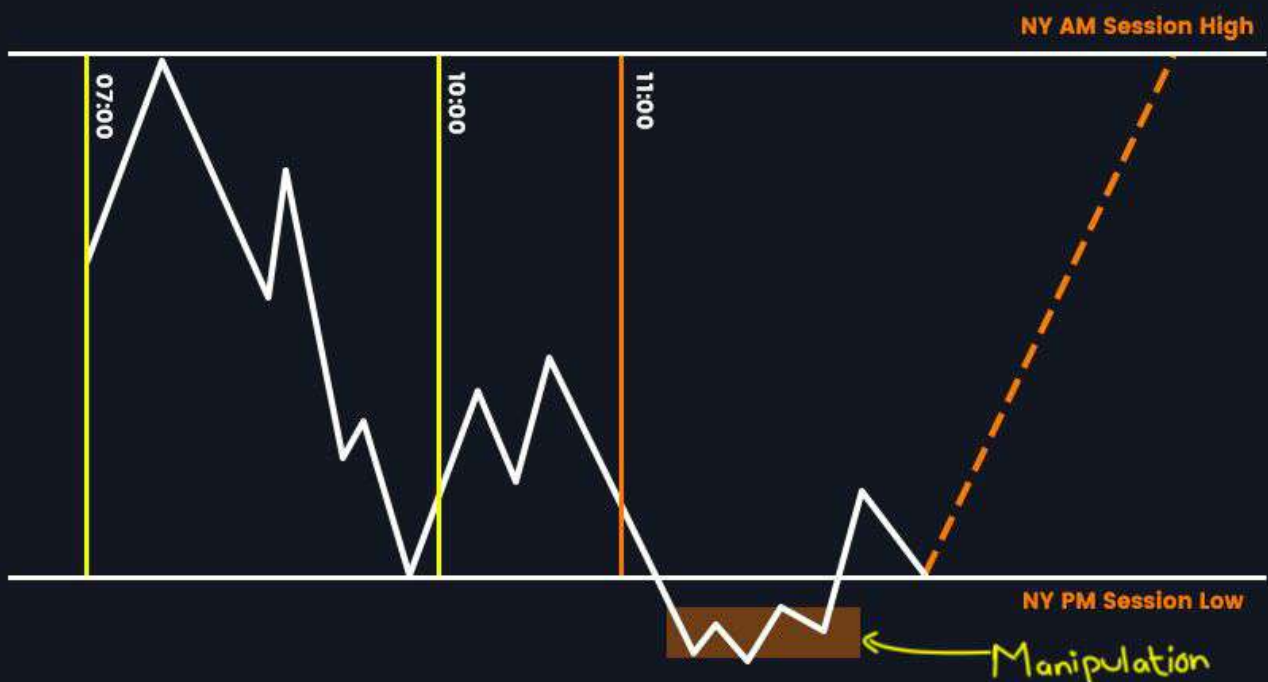

- » Wait for London session low and high to form and take a trade when there is a liquidity purge/manipulation either side.

# Low Probability Setups with Killzones

## 3. AM Session Ranges

- » Wait for New York Am session low and high to form and take a trade when there is a liquidity purge/manipulation either side.

# High Probability Setups with **Killzones**

## Checklist

- 1** Mark a higher timeframe PD Array in line with the trend.
- 2** Wait for price to tag it in the killzone times.
- 3** Probabilities for trades increase if the volatility in the killzone time was caused by news.
