Table of Contents

- » **What is Power of 3 and its components?**
 - Accumulation
 - Manipulation (2 types)
 - Distribution
- » **Examples of 2 types of manipulation**
- » **Why most people have low win rates with Power of 3**
- » **High Probability way of trading PO3**
- » **Why Power of 3 becomes redundant if you know Market Maker Models**

What is Power of 3 and its components

Key Points

- » Power of 3 is a price footprint that repeats again and again on in the Forex/Crypto/Commodity Market.

- » Power of 3 consists of 3 components:

- **Accumulation**
- **Manipulation (2 types)**
- **Distribution**

What is Power of 3 and its components

Key Points

- » **Accumulation:** Accumulation is the region where most of the long/short positions are being built by retail in hopes of a directional move.
- » **Manipulation:** Manipulations are fake price moves initiated by the market makers/Exchanges to take retail out of their positions.
 - Manipulation is also sometimes referred to as Judas Swing
 - Manipulation usually happens on Red Folder News. 
 - Manipulation can be of two types:
 1. Liquidity sweep based Manipulation
 2. Range based Manipulation at Higher Timeframe PD Arrays
- » **Distribution:** In the Distribution phase market moves in the direction in which retail initially anticipated the market to go. Price first took their stops in the manipulation phase and then continued in the desired direction.

Manipulation Types

Key Points

1. Liquidity sweep based Manipulation

- » In these types of manipulations/Judas Swing price just wicks into the Higher timeframe PD Array and then reverses. This usually happens on Red Folder News Events.

2. Range Based Manipulation at HTF PD Arrays

- » This Usually happens when price has formed a **lower timeframe** range above the key **higher timeframe** level.
- » In such scenarios price will take out the lower timeframe highs/lows at Red Folder News and will reverse in the opposite direction.

Reason for **Low win rates** with PO3

Key Points

1. Higher timeframe > Lower Timeframe

- » Most traders start applying Power of 3 concept without taking in account the **timeframe**. From personal experience and backtesting you can have a win rate of upto **60% with 4hr timeframe**.

2. Not Identifying a Higher timeframe PD Array

- » 90% of the traders apply the power of 3 concept without identifying a higher timeframe PD Array for their trade idea.
- » Higher timeframe PD Arrays include: **Liquidity, Orderblocks, FVGs**.

High Probability way of Trading Power of 3

Key Points

- 1. Identify the trend and make sure you align PO3 with trend.**
- 2. Identify a Higher timeframe PD Array.**
- 3. Wait for Red Folder News and execute if you see either one of the manipulation types.**

Similarity between MMXM and PO3

Key Points

MMXM

Power of 3

- 3 main stages are accumulation, manipulation and distribution.
- MMXM should be implemented at Higher timeframe PD Arrays.
- Manipulation/Judas Swing is of 2 types, Liquidity based and range based.

- 3 main stages are accumulation, manipulation and distribution.
- MMXM should be implemented at Higher timeframe PD Arrays.
- Manipulation/Judas Swing is of 2 types, Liquidity based and range based.
